

DORY

Technical Sheet

Dory is a seat designed for children from 4 to 12 years old who need postural support during recreational or didactic activities.

It is an extremely stable and robust seat with soft colored upholstery, pleasant to the touch. It can be combined with a large desk or with a tray table applicable to the armrests to favor the child's activities. Dory is a real active system designed to support children with special needs while they are playing or studying.

The chassis, adjustable in height, is covered with soft but compact padding adaptable to the child's body. It ensures a comfortable sitting position for long periods; the covering is extremely resistant to the stresses of use, such as scratching or tearing, or after repeated sanitization.

The armrests are adjustable in height and the chair can be supplied with a series of restraining supports such as thorax supports adjustable in height and width, restraining side supports for the pelvis adjustable in width or different kinds of belts for the trunk and / or the pelvis, to enable correct positioning. Feeling safe and properly supported, the child will be encouraged to engage himself in activities!

Dory equipped with footrest, trunk support, side supports, abductor, backrest extension and table.

Available colors.
